Height: 3 feet

Spread: 3 feet

Sunlight: ○

Hardiness Zone: 5a

Other Names: Box-leaved Holly

Description:

Valued for its black berries and attractive small evergreen foliage that is deep green with a silver midvein; its rounded, compact growth habit makes it perfect for smaller landscapes; can be sheared for a formal appearance; best pruning in Jun-July

Ornamental Features

Soft Touch Japanese Holly is primarily grown for its highly ornamental fruit. It features an abundance of magnificent black berries in mid fall. It has attractive dark green foliage with pointy silver spines. The small glossy oval leaves are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Soft Touch Japanese Holly is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and may require the occasional pruning to look its best. It is a good choice for attracting birds and bees to your yard. It has no significant negative characteristics.

Soft Touch Japanese Holly is recommended for the following landscape applications;

1075 North James Campbell Boulevard
Columbia, TN, 38401
ph: 931-388-3421

- Mass Planting
- Hedges/Screening
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Soft Touch Japanese Holly will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It has a low canopy. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub should only be grown in full sunlight. It prefers to grow in moist to wet soil, and will even tolerate some standing water. It is particular about its soil conditions, with a strong preference for rich, acidic soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
