

Deodar Cedar

Cedrus deodara

Height: 50 feet

Spread: 30 feet

Sunlight: ☉

Hardiness Zone: 6a

Other Names: Himalayan Cedar

Description:

A grand spreading tree with a broad habit of growth, pendulous branches and shimmering silvery-blue needles; used for its majestic architectural qualities as a solitary landscape accent, needs space to grow for full effect. Pruning Nov-Feb & May-Jun

Ornamental Features

Deodar Cedar is primarily valued in the landscape for its characteristic tiered habit of growth. It has attractive silvery blue evergreen foliage. The needles are highly ornamental and remain silvery blue throughout the winter.

Landscape Attributes

Deodar Cedar is an evergreen tree with a strong central leader and a stunning habit of growth which features almost oriental horizontally-tiered branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and usually looks its best without pruning, although it will tolerate pruning. It has no significant negative characteristics.

Deodar Cedar is recommended for the following landscape applications;

- Accent
- Shade
- Vertical Accent

Planting & Growing

Deodar Cedar will grow to be about 50 feet tall at maturity, with a spread of 30 feet. It has a low canopy with a typical clearance of 5 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This species is not originally from North America.
