

### **Brown's Yew**

*Taxus x media 'Brownii'*

Height: 8 feet

Spread: 10 feet

Sunlight: ○ ● ●

Hardiness Zone: 4a

#### **Description:**

A versatile evergreen garden shrub with an upright wide-spreading habit, bright green emerging foliage is striking against dark green needles in spring; a superb screening or foundation shrub, does well in shade; best pruning Nov-Apr, May-July

#### **Ornamental Features**

Brown's Yew is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental globe-shaped form. It has dark green evergreen foliage which emerges light green in spring. The ferny sprays of foliage remain dark green throughout the winter.

#### **Landscape Attributes**

Brown's Yew is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Brown's Yew is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Topiary

#### **Planting & Growing**

Brown's Yew will grow to be about 8 feet tall at maturity, with a spread of 10 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub performs well in both full sun and full shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
